Job Description:

Seize your opportunity to make a personal impact as an AI/ML Document Processing Developer supporting the Centers for Medicare and Medicaid Services (CMS). GDIT is your place to make meaningful contributions to challenging projects and grow a rewarding career.

At GDIT, people are our differentiator. As an AI/ML Document Processing Developer, you will help ensure today is safe and tomorrow is smarter. Our work depends on an AI/ML Document Processing Developer joining our team to build and operate backend services and batch pipelines that classify and extract data from high-volume document sets using AWS Bedrock. You will own the pipeline end to end: S3 ingestion, multi-format parsing, LLM and rules-based classification, OCR fallback, and the tooling around accuracy, cost, and throughput.

How an AI/ML Document Processing Developer will make an impact:

- Build AI unstructured data document scanning pipeline.
- Process a variety of unstructured healthcare provider and health insurance data files across many different document formats.
- Extract key data elements to be used for business logic and data validation.
- Convert unstructured document scanning results into useable structured business data.

What You'll Need to Succeed:

Education:

- Bachelor's degree or higher

Required Experience:

- 5+ years of experience developing RESTful services **and** event-driven backends in AWS

Required Technical Skills:

- Hands-on experience with AWS Bedrock or comparable LLM platforms, including prompt engineering, structured output, model selection, and token/cost management
- Production experience with AWS: S3, Lambda, ECS/Fargate or Batch, ECR, IAM, KMS, and CloudWatch
- Experience developing **RESTful services and event-driven backends**
- Strong **Python**, including concurrent processing for high-throughput batch workloads
- **Document and text processing**: PDF, DOCX, email formats; OCR using Textract, Tesseract, and/or similar tool
- Relational and NoSQL databases, such as **Postgres** and **DynamoDB**, and caching using **Redis**

- Docker image builds and deployment through CI/CD such as **Git, Jenkins and/or GitHub Actions**
- Unit testing and code coverage using **pytest** and/or equivalent

Security Clearance Level:

- Candidate must be willing and able to obtain a CMS T4 Public Trust clearance.

Required Skills and Abilities:

- Hands-on experience with agile development and tools, including JIRA
- Strong communication skills with the ability to present ideas to various levels/skillsets, both internally and externally.
- Provide technical assistance and end user troubleshooting for bug fixes, enhancements, and “how-to” assistance.
- Ability to multitask between multiple projects and both business and technical stakeholders.

Preferred Skills:

- Healthcare Service Industry or Center for Medicare and Medicaid Services (CMS) experience
- Experience measuring and improving model output quality (ground-truth data sets, precision/recall, A/B comparisons, prompt iteration based on error analysis)
- Experience with hybrid architectures combining deterministic rules with LLM inference
- Experience handling PII/PHI under HIPAA or similar (VPC isolation, encryption, least-privilege IAM, audit logging)
- Experince with Healthcare claims, insurance, or other regulated document workflows
- Salesforce data integration
- SQL analytics environments (Snowflake, Redshift) for pipeline reporting and validation
- Infrastructure as code (Terraform, CDK, CloudFormation)
- Active AWS certification(s)

Location:

- Remote

Citizenship Required:

- Must be a US Person and have lived in the United States at least three (3) out of the last five (5) years.

Frequently Asked Vendor Questions:

- **What is the mission of the program/contract?** On the Federal Services System Support and Oversight (FSSSO) {formally Marketplace Assister Technical Support (MATS)} program, GDIT provides state-of-the-art training and technical support services to in-person assisters in the Federally-Facilitated Marketplaces on behalf of the CMS Center for Consumer Information and Insurance Oversight (CCIIO) and its Consumer Support Group (CSG). Through ongoing research, training content development and delivery, and related technical support, the MATS team enhances assisters' knowledge and skills as they facilitate consumer enrollment in insurance coverage through the Affordable Care Act. We also provide the CCIIO with back-office automated support for assisters and issuers through operations, inquiry response, training, online certification, and database management.
    - In 2018, we expanded MATS Salesforce to support CCIIO's Marketplace Eligibility and Enrollment Group (MEEG); through the MEEG enrollment community, GDIT provides centralized issuer management workflows that enable CMS staff, issuers, and contractors to distribute targeted information and reduce manual work in disparate systems. We also provide centralized access to issuer information and plan data in MATS Salesforce in support of the annual qualified health plan (QHP) certification process led by the CCIIO Marketplace Plan Management Group (MPMG).
    - In 2021, the MATS team began implementing an extended solution to facilitate substantial data collection and monitoring as CCIIO implements the Consolidated Appropriations Act of 2021. Through MATS Salesforce, GDIT will support the registration and certification of Independent Dispute Resolution Entities (IDREs), provide a community where CMS staff and IDREs can manage the federal Independent Dispute Resolution (IDR) process, and maintain a system of record as the Federal Government receives complaints of violations of surprise billing protections by private health plans and issuers.
    - In 2023, GDIT launched the Marketplace Assister Community (the MAC) to support national Medicaid unwinding efforts. Through the MAC, GDIT pairs assisters with consumers losing Medicaid coverage so those assisters might help consumers identify alternative health coverage.
    - In 2024, GDIT launched the Oversight Group (OG) Provider Enforcement (PE) and OG Issuer Enforcement (IE). PE is focused on working with health care providers regarding complaints / violations, documentation, corrective action as a result of audits and compliance reviews and timeline tracking / reporting. IE works with issuers on cases related to price transparency, obtaining clarifications and data, corrective action as a result of identified compliance issues, and providing educational / training resources.

- **What will a typical workday look like for the Contractor? Is this a team setting?** Candidate must be available to work M-F 9AM-5PM Eastern Standard Time (EST) and will be expected to actively attend and participate in DAILY meetings. This will be a team setting, where the team member will report into a workstream's Technical/Development Lead, matrixed into the program's Solution Architect and Scum Team's Product Manager. Candidate will begin developing custom code once they have fully been onboarded and ramped-up into the workstream. ***We cannot accept candidates who are working on side-projects or other part-time roles!***
- **What are the top three skillsets the candidate should have?** (1) Hands-on experience with AWS Bedrock or comparable LLM platforms, including prompt engineering, structured output, model selection, and token/cost management; (2) Production experience with AWS: S3, Lambda, ECS/Fargate or Batch, ECR, IAM, KMS, and CloudWatch; (3) Document and text processing: PDF, DOCX, email formats; OCR using Textract, Tesseract, and/or similar tool.
